

Professional trading software

Being a True Partner

Professional trading software

Made to Trade

T8 Software® is a software company that develops fast and robust trading software for the professional trader.

This software enables traders and investors, via major brokerage companies like Interactive Brokers and Bank of America Merrill Lynch, to access the global financial markets using their Direct Market Access (DMA). Using excellent pricing models for derivatives trading, combined with portfolio and risk management systems enabling the users to trade and monitor risk simultaneously.

Being a True Partner

Different kind of trading styles

Professional proprietary trading

Our engineers have decades of software development expertise for professional market makers and proprietary trading firms. Our trading screen setup is similar to that of professional traders with an easy overview of the market situation, various color settings to alert changes in the market and easy and quick order entry screens. All the screens can be configured according to your own personal setup to create the perfect personalized view of your trading screen. The design of this

screen enables the trader to have a snapshot of implied volatilities, theoretical values and order book in any series and strike of both index and single stock options.

Volatility trading

The software, with excellent pricing models and multiple market access, is for example used by one of our clients for global volatility arbitrage trading. The differences between realized and implied volatilities are generating opportunities in the global markets. Although speed is a core rule in our

software development, we strongly believe that low latency is not the only factor that counts in profitable trading.

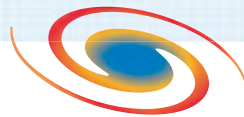

Retail trading

T8 Software® is also used by retail investors. The easiness of order entry, portfolio overview and risk analyses make it ideal for investors. The “one account solution” and the “one point access” to the major global equity and derivatives markets make the software extremely useful for private investors.

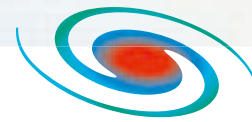

Available products

In march 2011 we released the first version of the Typhoon Trader® software and in august 2011 the Tornado Trading Toolkit® was added. We continue developing and evolving

both the basic software and new specific tools. With the collection of the T8 Trading Software, all users will get more customizable options and improvements in performance.

TYPHOON TRADER

TORNADO TRADING TOOLKIT

Typhoon Trader® software

Typhoon Trader® is a professional program for trading in exchange listed stock, options and futures.

The software is designed by professionals from the trading community and implemented by a team with long time experience in trading software development.

Click to Trade

This results in an intuitive interface for entering orders, monitoring positions and risk analysis.

The connectivities of Thomson Reuters and Merrill Lynch allow for trading 24 hours per day worldwide on all the major exchanges.

This approach makes it possible to trade and manage a global book with just one application.

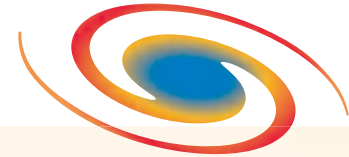

Currently Typhoon Trader® is used by market professionals like proprietary trading companies and hedge funds.

Main features

- Real Time Greeks and P&L
- One Click Trading
- Risk Analysis
- Circuit Breakers
- Multi Currency Support

Typhoon Trader® software

Risk management

The software supports real-time calculation of theoretical prices and greeks like delta, gamma, theta and vega. Combined with the position management this allows for real-time monitoring of your risk and also an

up-to-date reflection of your P&L. Next to this we also provide a Risk Analysis module to run several scenarios which allows you to check your greek positions and P&L for a range of different market situations. The software also supports

multiple currencies and by using a base currency it's possible to have an overview of all your positions and P&L in one currency. This is especially useful when using the multi-market access functionality of the system.

Our Partners

Interactive Brokers

"Create technology to provide liquidity on better terms. Compete on price, speed, size, diversity of global products and advanced trading tools."

Bank of America Merrill Lynch

As one of the world's largest financial institutions, Bank of America Merrill Lynch provides comprehensive market, industry, product and strategic advisory expertise to help our clients succeed in Asia and around the globe.

The beliefs of Department of Finance of NTU in education supply our students with the most comprehensive and professional finance education to respond the changes in the financial environment and the challenges in the field of financial services.

Frequently Asked Questions

How many markets are covered by Typhoon Trader®?

By using our (prime) brokers DMA networks all the major markets are accessible via the T8 global market data connector.

What products can be traded with the software?

Options, Futures, Stocks and ETF's.

What are the pricing models available?

Black & Scholes (Index Options) and Binomial Trees (Single Stock Options).

How is the risk management done?

The software shows real time profit & loss and Greeks. By using the risk analyses, traders can simulate different scenarios.

Is there a (group) portfolio over view?

The system enables group trading by proving combined portfolio and risk overviews.

Who uses this trading software?

Professional traders, hedge funds, brokers, proprietary trading groups, retail investors, clients of partner broker firms (Interactive Broker Technology Partner).

Has the software been certified?

T8 Software® consulting and it's trading software has been approved as Technology Partner of Interactive Brokers and runs on the Merrill Lynch DMA.

What platform runs it on?

Windows XP Home Edition or higher, Windows Vista or Windows 7 with .Net 4 installed.

What are the hardware requirements?

Intel® 1.5 GHz Processor, 1 GB of RAM, 1024 x 768 Resolution and video hardware acceleration.

What active financial market data vendors are supported?

Thomson Reuters, Interactive Brokers, CQG.

Does it allow group trading?

The software enables group positions overviews (observatory) and risk management simulations.

Does the software have a quoting facility?

The software doesn't support quoting facility and is purely based on orders.

Does it support co-location?

All the software runs on one machine.

Which (prime) brokers are supporting the software?

Interactive Brokers, Bank of America Merrill Lynch.

How do I receive the updates?

Via the internet or client support website.

How is the support organized?

The software has online help functionality. Via education and our virtual trading academy we educate our client to optimize software usage.

Is there on-line help functionality?

Both in the software and on the web are trading manuals and support available.

Are there training courses/web seminars?

Via our partner organization True Partner Education (www.tp.edu.hk) we organize training and education sessions and seminars for our clients. Also via the client site of our partner organizations (education and brokerage) we try and service our client base.
